## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 rejected under 35 U.S.C. 103(a) as being unpatentable over Yu ('637).

Yu teaches the following claimed limitations as cited below:

1. A method for forming ultra shallow junctions, comprising:  
providing a semiconductor (Col.5, lines: 50-60);  
implanting a dopant species into said semiconductor (Col.s 5-6, lines: 60-5); and  
annealing said implanted semi-conductor with a ultra high temperature anneal comprising  
annealing temperatures from 1050 to 1350 degrees C (Col.6, lines: 1-10). Yu fails to teach  
annealing at a temperature of 1150-1350 as claimed by the Applicant.

However, these claims are prima facie obvious without showing that the claimed ranges achieve unexpected results relative to the prior art range. In re Woodruff, 16 USPQ2d 1935, 1937 (Fed. Cir. 1990). See also In re Huang, 40 USPQ2d 1685, 1688 (Fed. Cir. 1996) (claimed ranges of a

result effective variable, which do not overlap the prior art ranges, are unpatentable unless they produce a new and unexpected result which is different in kind and not merely in degree from the results of the prior art). See also *In re Boesch*, 205 USPQ 215 (CCPA) (discovery of optimum value of result effective variable in known process is ordinarily within skill of art) and *In re Aller*, 105 USPQ 233 (CCPA 1955) (selection of optimum ranges within prior art general conditions is obvious).

2. The method of claim 1 further comprising an amorphizing implant (Col.s 5-6, lines: 60-5).

3. The method of claim 2 wherein said amorphizing implant comprises implanting a species from the group consisting of silicon, germanium, antimony, indium, arsenic, neon, argon, krypton, and xenon (Col.s 5-6, lines: 60-5).

4. The method of claim 1 wherein said ultra high temperature anneal comprises times from 0.5 milliseconds to 3 milliseconds (RTA- rapid thermal anneals are performed for such durations).

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
